Special Meeting Agenda PUD Board of Commissioners Tuesday, July 30, 2024 9:00 AM 310 Four Corners Rd. Port Townsend, WA 98368 And on line VIA ZOOM

To join online go to: <u>https://zoom.us/my/jeffcopud</u>. Follow the instructions to login. Meetings will open 10 minutes before they begin. TOLL FREE CALL IN #: 833-548-0282, Meeting ID# 4359992575#. Use *6 to mute or unmute. *9 to raise a hand to request to begin speaking.

Page

1. Call to Order

JPUD will be offering both virtual on-line meetings as well as in-person meetings, unless advance notice is provided. Online participant audio will be muted upon entry. Please unmute at the appropriate time to speak. If you are calling in, use *6 to mute and unmute and*9 to raise a hand to request to speak.

2. Roll Call

Recommended Action: Approve a Motion to adopt agenda as presented

- 3. Agenda Review
- 4. Presentation: 10-Year long range planning, Budget, Staffing levels and Finance Workshop
 - 4.1 <u>10-Year Plan Presentation</u> *P*

2 - 55

5. Adjourn

Jefferson PUD 10-Year Plan

An introductory look at structured growth planning for our utility.

310 Four Corners Rd, Port Townsend, WA | July 30, 2024

O.

Today we will cover:

Symbols shown above will indicate presentation sections.

Why we are here This planning session looks forward. We aim to align our Board, staff, and customer-owners on the future needs of our utility.

- Set Priorities
- Review Costs
- Begin Long-Range Planning

Our Commission

JEFF RANDALL

JEFF RANDALL (Dist 1)

Jefferson PUD is guided by three publicly-elected officials who direct based upon the Strategic Plan. **Commissioners** are advised by staff, outside professionals, and our customerrers to guit utility forward. Connectin owners to guide the

Connecting our Community

Calculation #2

DAN TOEPPER (Dist 3)

GOALS

The PUD's Strategic Plan guides its day-to-day operations.

Our grid requires more. Aging equipment, increased demand from regional growth, construction cost, and timelines dictate the need for immediate action to ensure our power, water, and communication services remain reliable.

RELIABILTY

Page 7 of 55

Where we are

Power: Loading Issues & Voltage Issues

Utility-side loading associated with outages and demand-related issues affecting equipment. Voltage fluctuations caused by high demand, aging infrastructure, underbuilt urban growth, equipment failure.

Page 8 of 55

Where we are: Examples of load & voltage-related power issues

Loading Issues: Breaker Lane

- Continuous high demand stresses equipment, leading to increased outage potential & longer outage duration due to switching operations.
 2023 Port Ludlow Transformer Peak Load – 21.5MW
 - Total Outage Time increase markedly during winter events
 - Lost Revenue in 2023 (est.) \$_

Voltage Issues: Marrowstone Island

- Lower voltage leads to malfunctions with customer appliances and more outages.
 2023 Outages on Marrowstone (single household)
 - Safe operating voltage range (customer side) +/- 5% for 120V (114V 126V)

Loading Example: Breaker Lane, Port Ludlow

- Reclosers automatically open if Breaker Lane reaches 530 Amps.
- Continuous demand (and peak load) stresses equipment, leading to reliability concerns.

Jefferson County PUD #1 Electrical Demand History

• Winter peak demand utility wide has increased 30.8% since 2015

Voltage Example: Marrowstone Island

Voltage Example: Marrowstone Island

WHAT DOES THIS MEAN?

During peak load situations, as shown in January of 2024, power demand on Marrowstone Island meant voltage regulators are required to operate at their highest possible tap position to ensure stable voltage for operation.

Page 12 of 55

Where we are

Water: Capacity Issues & Water Volume Issues

Utility-side outdated and/or undersized pipes, treatment, reservoirs, workforce to maintain. Water rights concerns, water system source limitations, undersized equipment for well size, system leak loss.

■←● ↑ ●→◆

Capacity Issues: Quilcene Water System

- Water rights are very specific. The recently completed Quilcene water system upgrades illustrate infrastructure cost-to-service-connection concerns.
 - New 105,000-gallon ground level concrete tank to replace elevated 33,000-gallon tank
 - Total water services: 40
 - Total project cost \$3.1M
 - Potential services vs water rights

Volume Issues: Bywater Bay System

- Ideally, the system should deliver a consistent and sufficient volume to meet customer demand while minimizing losses.
 - Non-revenue water Leak loss 6.5%. Distribution losses stresses equipment unnecessarily
 - Source Limitations Regulatory & Availability
 - Reaching maximum connections (state assigned) based upon volume (production)

Capacity Example: Quilcene System

Quilcene Water System

Quilcene received a ground level 105,000-gallon water reservoir to replace the aging elevated 33,000-gallon gravity-fed system.

Total project cost: \$3.1M Out-of-Pocket Cost: ~\$1M Number of customers: 40

> How do we meet customer needs and state and federal requirements while remaining cost conscious?

Volume Example: Bywater Bay System

Bywater Bay System

3 wellheads provide water to 281 service connections. The Shine Plat neighborhood (23 homes) was connected in 2023.

BB Well #3 (Reynolds)

Additional connections adds greater demand on aging infrastructure.

BB Well #2 (Bywater = Alpine Court)

BB Well #1 (Shine)

Page 16 of 55

Where we are

Broadband : Capacity & Bandwidth (volume)

The **total** amount of data that can be transmitted through the network at a given time. The **speed** at which data can travel through the network.

Capacity: Futureproofing our Network

Capacity refers to the total amount of data that can be transmitted through the network at a given time.

- How much capacity do we have?
- What impacts fiber capacity? (adding end users, data farming, etc.)

Bandwidth: Ensuring Promised Speeds

Higher bandwidth rating indicates that data can travel through the network faster.

- What is our current (or planned) broadband bandwidth?
- What impacts fiber bandwidth?

Now is our opportunity to build for the future.

NETWORK GOALS:

- Long-term: Position our network to support the capacity to provide every PUD customer with a fiber connection.
- Grant Buildout Goal: Provide service to 10,000 customers countywide.

NETWORK BENEFITS:

- \$70M in additional equity for the PUD system.
- SmartGrid for reliability.
- Broadband division estimated to be revenue-positive in 5 years.

We are building a system for the future.

Bandwidth GOALS:

- Service Pathways: Reliability is key. Providing diverse pathway, including satellite backup systems, beyond existing direct fiber pathways is essential.
- Looping: Additional network looping provides greater reliability and failover protection.

Network BENEFITS:

- Diverse Network Funding: \$60M grants, \$10M loans, \$2M PUD funds.
 - State-of-the-Art Network.
- Staffing for the Future: Proper staffing levels & support to maintain growth.

We've looked at specific examples within each facet of the utility illustrating a need. These are just a few of the projects on our horizon.

> Next, we will look at where–ideally–we need to be as a utility within the next decade and the solutions that get us there.

WATER

System Plan Evaluation

In 2022, the PUD approved a 10-year work plan for our water division. The work plan, and expansion of the plan, help the utility and funding agencies identify projects for capital improvement. Capital improvements listed act are a guide for financial conversations, engineering, and construction moving forward. Focusing the improvements list to specific projects aids in concise timelines and cost estimates.

Solutions & 60/15

Broadband Capacity & Bandwidth

Commission

Operations - Broadband Finance Human Resources

Public-facing Project Information Customer Service & Communications

By looking ahead to the end goal, we can generate solutions. Future infrastructure needs requires adaptability to achieve.

Next, we dig deeper into how as a utility we approach the work load of the next decade.

How we get there

Teamwork and the ability to move projects forward according to varying timelines are key.

Let's look at specific projects on the horizon to further identify need and to understand the complexity of the task. The goal: Create realistic timelines for projects to meet our 10-year needs.

How we get there

Power: Substation Project List

- Quilcene
- Port Ludlow
- Chimacum
- Port Townsend
- Dana Roberts

SHOWN: Quilcene Substation

Placeholder Slide for Substation Project Fly-over Video Please see meeting video recording for video review.

4.1 Quilcene Substation bay

- 59' x 178' extension to the North
- Additional bay added
- Additional switch & reclosures

Project Goals:

- Improve capacity to 20MW
- Reposition Control Building
- Easier access for maintenance
- New outgoing feeders
- Improved SCADA control

Est cost: \$9.8M BUDGET DISCUSSION

SHOWN: Quilcene Substation

DRAFT concept design by ICPE

Placeholder Slide for Substation Project Fly-over Video Please see meeting video recording for video review.

4.2 Port Ludlow Substation extension

- $25^{1}/_{2}$ ' x 178' extension to NE
- Relocation of Control Building
- Inclusion of vaults inside fence
- Rebuilt transformer

Project Goals:

- Improve work area within sub
- Space for Breaker Lane feeder
- Dedicated Control Building
- New outgoing feeders
- Improved SCADA control

Est cost: \$9.2M BUDGET DISCUSSION

4.3 Chimacum Substation bay

SHOWN: Chimacum Substation

- Substation footprint unchanged
- 25MW transformer
- 15kV Circuit Switcher
- Recloser & Bypass Structure
- New Control Building for switch gear

Project Goals:

- Dedicated Indian Island feed
- Space for Breaker Lane feeder
- Dedicated Control Building
- New outgoing feeders
- Improved SCADA control

Est cost: \$5.8M BUDGET DISCUSSION

DRAFT concept design by ICPE

Placeholder Slide for Substation Project Fly-over Video Please see meeting video recording for video review.

4.4 Port Townsend Substation build

- 10-acre land purchase from • **Jefferson County**
- 20MW transformer •
- **15kV Circuit Switcher**
- Recloser & Bypass Structure •
- Control Building for switch gear • **Project Goals:**
- Provide dedicated Indian Island • feed via undersea cable
- Handle additional PT capacity
- Improve population center power reliability

Est cost: \$10M **BUDGET DISCUSSION**

4.5 Dana Roberts Substation expansion

- Additional bay added to sub
- 20MW transformer
- 15kV Circuit Switcher
- Recloser & Bypass Structure
- Bus currently in place
- Battery storage system

Project Goals:

- Provide additional capacity for Port Townsend
- Handle future electrified ferry
- Improve power reliability
- New outgoing feeders
- Improved SCADA control

Est cost: ~\$5-7M BUDGET DISCUSSION

DRAFT concept design

SHOWN: Dana Roberts Substation

How we get there

Hydro Generation :

- 5MW total generation
- In-line gravity-fed system
- Regional & National Partners
- Emergency generation
- Battery backup micro grid
- Electrified ferry system demand

4.5 PT Pipeline Hydro Generation

- 5MW total power generation (3 generators)
- Metered at generation site
- 24" diversion line from PT pipeline with
- Battery storage at Dana Roberts substation for electric ferry capacity
- Gravity-fed system

Est cost: ~\$22.3M

Project Goals:

- Provide backup power for emergencies
- Carbon-free energy
- Reliable source of energy

How we get there

Power:

Feeder Project List

- Breaker Lane
- Chimacum
- Undergrounding Marrowstone
- New substation outgoing feeders
- Undersea Cable Marrowstone, Gardiner
- Feeders out of Irondale Sub

4. Breaker Lane – Port Ludlow

- miles of underground distribution line
- Switch gear
- Recloser & Bypass Structure
- Vault & Switch cabinets •
- Easements required
- DNR permitting required

Est cost: \$5.2M **Project Goals:**

- Provide loop feed to PL north bay customers
- Handle added capacity for urban growth
- Outage reduction

SHOWN: PL Substation-to-Breaker Lane Concept

4. Chimacum Sub–Indian Island Express Feeder

SHOWN: Chimacum Substation-to-Indian Gov't Cut Concept

- 3 miles of underground distribution line
- Switcher gear
- Recloser & Bypass Structure
- Vault & Switch cabinets •
- Easements required
- Boring permit underway
- Easements granted

Est cost: \$5.8M **Project Goals:**

- Provide dedicated feed to • Indian Island Naval Magazine
- In conjunction with proposed undersea cable provides loop feed
- **Dedicated Marrowstone Island** • feed to improve reliability

4. New PT Sub–Indian Island Loop Feed

- 2.7 miles of undersea distribution
- Switcher gear
- **Recloser & Bypass Structure**
- Vault & Switch cabinets
- Easements & permitting required
- Navy partnering

Est cost: In design

Project Goals:

- Provide dedicated non-ariel feed to Indian Island Naval Mag
- In conjunction with Chimacum • sub feeder
- Can provide secondary • distribution pathway for Marrowstone Island

SHOWN: Proposed PT Substation-to-Indian Island Concept

4. Indian Island–Marrowstone Undersea Feed

- .80 miles of undersea distribution
- 2.0 miles of undergrounding
- Follows existing waterline pathway
- Vault & switch cabinets
- Easements & permitting required

Est cost: In Design

Project Goals:

- Dedicated loop-feed for Marrowstone Island from Indian Island loop feed.
- In conjunction with dedicated Indian Island feeder project.
- Improves reliability. •
- Reduces voltage issues.
- Outage reduction.

SHOWN: Proposed Indian Island-to-Marrowstone Concept

4. Gardiner Undersea Feeder

- ~1.5 miles of undersea distribution
- Switch gear
- **Recloser & Bypass Structure**
- Vault & Switch cabinets
- Easements & permitting required

Est cost: In Design

Project Goals:

- Provide dedicated loop feed for customers in Gardiner from Irondale substation.
- Undersea feed offsets immediate need for future Discovery Bay substation relocation project.
- Outage reduction for Gardiner.

SHOWN: Proposed Gardiner undersea concept

How we get there

Outage Prevention Work

- \$1.5M annual spend for vegetation
 management
- Undergrounding for new construction
- Capacity charge implementation
- Substation upgrades
- SCADA systems

Page 47

- Identify aerial-to-underground projects
- Replacing failing underground circuits

SHOWN: 49th Street 3-Phase Project

Regional PUD staff and Jefferson County

continue to coordinate an interlocal agreement over management of the Hadlock wastewater system.

Wastewater system operation will serve a large portion of Hadlock residents and increase the PUD workforce.

Workforce

Jefferson PUD is proud to provide high quality living wage jobs in a positive, professional work environment.

As of July 2024, Jefferson PUD has a full-time staff of 76 team members.

TAKEAWAY'S

We anticipate reaching 100 staff members by 2028 thanks to additional service offerings and a strong customer-focused approach to supporting our customer-owners.

Budget

A strong financial standing is the core of a healthy utility. Our inherited, aging infrastructure demands an influx of capital over the next decade to maintain our grid.

> Capitol projects, workforce growth, office expansion, grant funding and tracking, and new revenue streams demands more from our finance department.

The Future

A decade into serving our community with reliable, affordable power and we must continue to rely on our professional workforce to ensure our local infrastructure remains healthy.

Organizational Structure A closer look at the internal functions of the utility with a focus on maximizing efficiency.
